## Diabetes

Diabetes can be fairly defined as a condition which impairs your body's ability to adequately control the level of blood sugar.

- This inability is normally attributed to a failure of the pancreas to make **proper amounts of insulin**, or
- To "**Insulin resistant**" cells that fail to utilize available insulin.
- **Few physicians attribute any part of the diabetic problem to the action of the liver, even though the liver processes glucose (blood sugar), and in doing so works synergistically with the pancreas (producer of insulin) to maintain appropriate blood sugar levels.**

**There are two types of diabetes:**

**Type 1 diabetes**, or **insulin-dependent diabetes**... usually first diagnosed in children, teenagers or young adults. **(diagnosis frequently follows, by three to six weeks, the administration of a vaccination)** In Type 1 diabetes, the pancreas does not make insulin, or stops making insulin, apparently due to damaged beta cells. **(note: Vaccination is a process of injecting toxins...dead or near dead viruses, bacteria, partial dna strings and preservatives often containing mercury and or aluminum... into the body to stimulate an immune response...Many "alternative" physicians are opposed to this practice due to the risk of such horrific "side effects" as MS, AUTISM, and DIABETES to name a few. The FDA, CDC, and AMA wholeheartedly support vaccination programs, and staunchly defend the use of thimerosal (a mercury compound) as a "harmless" ingredient.)**... Dr. John Classen has published voluminous data showing that the hepatitis B and other vaccines are closely linked to the development of insulin dependent diabetes. *"Infectious Diseases in Clinical Practice, October 22, 1997".*

**Type 2 diabetes**, or **non-insulin-dependent diabetes**, is the most common form of diabetes. Type 2 diabetes can develop in anyone at any age, and consists of a situation where a person's body makes insufficient amounts of insulin or fails to utilize the insulin that is produced due to "insulin resistance".

Diabetes, in either form is generally recognized as an "immune deficiency" disease.

- **Immune Deficiencies are frequently related to viral or bacterial attacks on your body...a factor almost universally ignored by the medical establishment when dealing with diabetes.**

We are not physicians. Nothing in this document is to be construed as medical advice. Always consult a licensed medical professional prior to beginning or ending any course of treatment for any medical condition. Even though we believe all statements contained on this page to be true, none have been evaluated by any "oversight agency", including the US FDA or US EPA. Examples given are just that, examples. Unless stated otherwise, examples reflect unverified information provided by third parties. No assurance of comparable results is given. The Generators we sell are "MADE IN COLORADO" using domestic & imported components. We have no affiliation with "Silver Edge Health" or "Life & Health Research", any such inference is incorrect & potentially fraudulent

**The cause of diabetes, depending upon who's information you are referencing, will be:**

- **Genetics...you got it from your parents**
- **Toxins...mercury and aluminum from vaccines, fluoride sulphate from the water, aspartame poisoning, etc.** "The incidence of childhood asthma, diabetes, and autoimmune diseases has doubled during the past 20 years; Attention Deficit Disorder has tripled, Autism has increased 600%." **Stanley Monteith, M.D. ... Dr. Barthelow Classen**, studying diabetes in Finland,~ found that problems of infection "occurred in statistically significant clusters three to four years after vaccines were administered. The more vaccines you are exposed to the greater the risk of diabetes."
- **Poor life choices...you are too fat, eat too much sugary stuff, too much fried and greasy food, don't exercise enough...essentially all your own fault**
- **Some combination of the above factors**

The **complications of diabetes** can include: blindness, kidney failure, heart disease, nerve damage, and limb amputation.

Current **FDA approved medications** can have **serious side-effects** including nausea, diarrhea, skin rash, weight gain, respiratory infections, liver damage, and headaches.

**Clearly there is no universally accepted "Cause for Diabetes".**

**Further, and not surprisingly, there is no universally accepted "Cure for Diabetes".**

Conventional medical treatment revolves around "managing the symptoms" by controlling diet and exercise, monitoring blood sugar levels, and supplementing insulin in some cases.

Severely damaged peripherals (legs, feet, the odd hand) that are at risk of decay (gangreen) are surgically removed to prevent the (often fatal) spread of bacteria and other toxins through the body.

I cannot "guarantee" that the following plan will prevent or cure diabetes, or even alleviate its' symptoms...I am not a physician...I have not "run this past" the FDA, CDC, EPA or any other member organization of the "US alphabet soup club".

I do have some formal training in engineering and other "hard subjects" requiring the use of "cause and effect logic".

I have completed "**Conclusion Jumping 101**"...If it looks like a DUCK, walks like a DUCK, quacks, and sits on the water...It's Probably A Duck..."

## A WORKING THEORY FOR THE CAUSE OF DIABETES

Diabetes (of both types) appears to be the result of persistent failure of the Liver and Pancreas to perform their specific functions.

I believe this failure is brought on by the "activation" of a dormant pathogen (virus or nano-bacteria) resident within the body of the victim.

- The presence of "resident dormant pathogens", transmitted among family members, can produce problems that appear to be genetic when no genetic basis exists. As an example, female mice with breast cancer, in some cases, have been shown to be afflicted with a "parasitic worm" that is transmitted mother to daughter, remaining dormant in the daughter until puberty. The result is multi generational breast cancer, that appears genetic, but is not.

The "activation" of the pathogen, is frequently the result of an "impaired or suppressed" immune system.

- The immuno suppressant of choice, for laboratory trials, is usually mercury. Mercury, in the form thimerosal, is commonly used as a "preservative" in vaccines. **“When you take the vaccination it suppresses your immune system and it makes you susceptible to about any disease that comes around because your body can't function and can't fight off these infections.”** ... Dr. Boyd Haley, chairman of the Department of Chemistry at the University of Kentucky
- Mercury's immuno suppressive toxicity will be multiplied in the presence of other toxic metals, such as aluminum. Mercury is 100 times as toxic in combination with aluminum as it is alone.
- **Fluoride**... a common water contaminant, added to drinking water in some areas for "dental health " reasons (but currently banned in many European countries) may well contribute to impaired immune systems. **"The initial Varner et al. study was done to see if alum (aluminum sulfate) added to drinking water as a clarifier would combine with fluoride and penetrate the blood-brain barrier. The results were startling. 80% of the animals in the low dose range died before the experiment was completed. The dose of fluoride and alum fed to the animals in drinking water was similar to that in artificially fluoridated drinking water. The same results were confirmed in two subsequent studies."**

## Treating the Symptoms of Diabetes while addressing the Cause

The liver and pancreas work synergistically to control blood sugar levels.

The liver and kidneys work together to filter and detoxify the blood.

The health of liver, kidneys, and pancreas are inseparable.

Colloidal silver, with particle sizes below 6 nanometers, has demonstrated the ability to alleviate symptoms associated with viral, bacterial and mycoplasmal infections...including, in some cases, many of the problems associated with diabetes. (Dramatic improvement in blood sugar level regulation is not uncommon) This result may be due to the fact that silver acts as a catalyst, de-activating the oxygen transfer mechanism in the enzyme of the outer cell wall of pathogenic bacteria and the exterior shell of pathogenic viruses.

This result may also be due to the fact that silver does not readily combine with mercury, and may actually help to "drive mercury" from the body.

- (this notion comes from [http://www.ibiblio.org/amalgam/...](http://www.ibiblio.org/amalgam/) "QUANTITATIVE ANALYSIS OF Hg, Ag, Sn, Cu, Zn AND TRACE ELEMENTS IN AMALGAM REMOVED FROM AN ABUTMENT TOOTH UNDERNEATH A GOLD ALLOY BRIDGE THAT HAD BEEN IN VIVO FOR NINE PLUS YEARS", showing a clear tendency of mercury to migrate away from silver while in the mouth.)

The liver requires an adequate supply of selenium and vitamin e to produce the hormone glutathione. Without glutathione, the liver is unable to function and fails. Glutathione insufficiency is also linked to the formation of cataracts and other vision problems.

Silver and selenium tend to "displace" each other in the body. Consequently, taking silver, and then supplementing with selenium after the silver has had time to clear the stomach, assures the presence of silver, but not the accumulation of silver. (argyria risk is removed or significantly reduced)

- This notion is derived from studies underlying EPA CASRN 7440-22-4.

Liver Health can be greatly improved with the addition of Silymarin to the diet.

Silymarin is an ingredient in Milk Thistle seed and is relatively inexpensive.

- Silymarin has been shown, in European "**University Level Studies**" and "**Clinical Studies**" (neither are recognized by US FDA) to promote liver regeneration, shedding of damaged hepatic (liver) cells, shedding of toxins, and reversal of hepatic cirrosis. (Liver transplants are rare in Europe) Although these studies are widely available on the internet, and can be found in prestigious medical archives throughout the world, they carry no medical or legal weight in the US.

## The need for supplemental Iodine...

- Many, if not most Americans are "Iodine Deficient" according to Dr. Johnathan V. Wright and other "Alternative Physicians".
- In fact, many of them insist that the current RDA of Iodine is less than 1/83 of the amount necessary for optimal health. (*Nutrition & Healing Vol 12, Issue 4, May 2005*)
- Although optimal health is an important goal, our goal is to shed the toxins that are contributing to diabetes. **The presence of iodine in your system causes your body to shed fluoride, one of the primary offending toxins contributing to your compromised immune system.**

An easy way to see if you are iodine deficient... accurate about 85% of the time (so I read) is : paint a 2" spot of "tincture of Iodine" (from the pharmacy or drug store... **tincture of Iodine** ...no substitutions) on your chest or stomach. If it is gone within 24 hrs, you are deficient. (When I first tried that test, mine went away within 2 hrs). The iodine is absorbed by your body... move the spot from place to place and you will gradually help to alleviate the deficiency.

This Iodine deficiency can be resolved by adding kelp (seaweed) to the diet (tastes a bit like rotten fish smells) I personally eat about 4 tsp of KELP weekly (Luckily it doesn't seem to affect my breath.)

Iodine supplement tablets are available from your health food store (they cost more than the kelp), and liquid iodine supplements are available by prescription.

**NOTE: Iodine in excess can be toxic, consult your physician before adding significantly greater than rda amounts of Iodine to your diet.**

**Water**... drink adequate amounts of water, preferably water not containing fluoride. Mineral water is fine.

Distilled water can be a problem... until the diabetes is under control, your kidney output can strip your body of needed nutrients and the distilled water makes the situation worse. Avoid Coke, Pepsi, Etc.

Avoid any type of "diet drink". They nearly all contain aspartame, which is extremely toxic.

Avoid alcohol, at least until you get the Diabetes under control... then only in moderation... Alcohol in excess can ruin your life even if you are not diabetic. (spend the money on something flattering for your spouse... the results can be a lot of fun)

We are not physicians. Nothing in this document is to be construed as medical advice. Always consult a licensed medical professional prior to beginning or ending any course of treatment for any medical condition. ## **Common dietary supplement amounts: 160# person**

**Nano-particle (USP) Colloidal Silver**... (4ppm, 1/4 to 6 nm particle size)... begin with 4 oz per day, increase gradually to 8oz per day in three divided doses. Continue for 66 days, maintenance dosage of 1oz per day, or as necessary. (expect results within 10 days or less)

**Conventional colloidal silver**... apply topically to any open sores or wounds that are not healing... USP will work in this application, but conventional cs works better.

**Selenium**... 400 mcg daily, taken *long enough before or after taking colloidal silver so that the cs has cleared the stomach*. Decrease to 200 mcg after 60 days.

**Vitamin E**... 400 IU daily... natural (d) form, or "mixed tocopherols". Synthetic vitamin e is a "bad plan".

**Silymarin**... milk thistle extract... 80% silymarin content, or ground milk thistle seed... this can vary widely... 1 to 3 grams daily is OK... milk thistle has no "maximum" safe dosage, but some cheap brands contain "preservatives" that are toxic.

**Iodine**... see above

## **General Instructions**

**Diabetes is a serious and potentially fatal condition.**

**Do NOT:**

- **START**
- **END**
- **OR CHANGE**

**Your course of treatment without consulting your physician.**

When you consult your physician about a medical condition, you are "renting" his/her million dollar education.

No one's judgement is better than his/her knowledge of the FACTS... Don't Lie, Don't conceal... Make the Absolute Truth Known to your Physician... Take full advantage of the education that you are paying "rent" on!

*Scott Clayton, June 2005*
